Repair Execution Mode

Choose how the repair process should be executed for the assessed data.

DATASET

pharmacy.csv

SELECTED COLUMN

subject_id

SELECTED TAXONOMY

Duplicate Records

AFFECTED ROWS

1,500

Choose Execution Mode

Select how the repair should be handled after quality assessment.

Human-in-the-Loop

Review and approve the repair before it is applied.

Review each proposed repair

Approve, modify, or reject

Changes require user confirmation

Recommended for medical data review

Fully Automatic

Execute the repair automatically without manual approval.

Executes automatically

No user interaction

Fast execution

Suitable for trusted repair strategies

Direct Automated Resolution

DAR

Resolve simple, low-impact errors directly before download.

Simple direct resolution

No repair proposal review

No explainability or audit step

Goes directly to download

What Happens Next

The Direct Automated Resolution layer will resolve the selected low-impact error directly. Placeholder Values can be replaced using the available value strategy, while Duplicate Records can be cleared by retaining the first occurrence. The repaired dataset will then proceed directly to Download.

Continue to Direct Resolution →

Direct Automated Resolution

Resolve Selected Data Issue

Resolve this low-impact data quality issue directly. No repair proposal review, explainability, audit, or report generation is required for this execution path.

DATASET

pharmacy.csv

SELECTED COLUMN

subject_id

ERROR TAXONOMY

Duplicate Records

AFFECTED ROWS

750

Clear Duplicate Records

Remove duplicate records from the dataset while retaining the first occurrence of each identical record.

DUPLICATE RECORDS

750

Records scheduled for removal

RETENTION RULE

Keep First

The first occurrence remains in the dataset.

RESOLUTION TYPE

Direct

No manual repair proposal review is required.

Duplicate Rows

Only duplicate group and row information is shown; full record details are intentionally omitted.

DUPLICATE GROUP	ROW
Group 1	469
Group 2	563
Group 3	640
Group 4	654
Group 5	882
Group 6	897

Before clearing duplicates

This action removes the subsequent occurrences of identical records. The first occurrence is retained as the canonical record.

Clear Duplicate Records

Direct Automated Resolution

This resolution path is intentionally limited to low-impact errors. After the selected action is applied, the repaired dataset proceeds directly to the Download layer.

Direct Automated Resolution
