Selected Column

Review your selection before starting the assessment.

value

Categorical

Select Error Taxonomy

Choose the type of quality issue you want the system to investigate for the selected column.

Placeholder Values

Detect placeholder values such as N/A or Unknown.

Duplicate Records

Identify duplicate records.

Statistical Anomalies

Unusual numerical values of non medical data.

Implausible Values

Unusual numerical values of medical data.

Temporal Inconsistencies

Conflicting dates and time relationships.

Unit Inconsistencies

Inconsistent measurement units.

Semantic & Contextual Inconsistencies

Unusual textual values of medical data.

Ready for Quality Assessment

The system will process the selected taxonomy instead of automatically guessing the error type.

Choose Execution Mode

Select how the repair should be handled after quality assessment.

**Human-in-the-Loop**

☐

Review and approve the repair before it is applied.

- Review each proposed repair
- Approve, modify, or reject
- Changes require user confirmation
- Recommended for medical data review

**Fully Automatic**

☐

Execute the repair automatically without manual approval.

- Executes automatically
- No user interaction
- Fast execution
- Suitable for trusted repair strategies

**Direct Automated Resolution** DAR

☒

Resolve simple, low-impact errors directly before download.

- Simple direct resolution
- No repair proposal review
- No explainability or audit step
- Goes directly to download

What Happens Next

The Direct Automated Resolution layer will resolve the selected low-impact error directly. Placeholder Values can be replaced using the available value strategy, while Duplicate Records can be cleared by retaining the first occurrence. The repaired dataset will then proceed directly to Download.
