Choose Execution Mode

Select how the repair should be handled after quality assessment.

Human-in-the-Loop
Review and approve the repair before it is applied.

☐

- Review each proposed repair
- Approve, modify, or reject
- Changes require user confirmation
- Recommended for medical data review

Fully Automatic
Execute the repair automatically without manual approval.

☒

- Executes automatically
- No user interaction
- Fast execution
- Suitable for trusted repair strategies

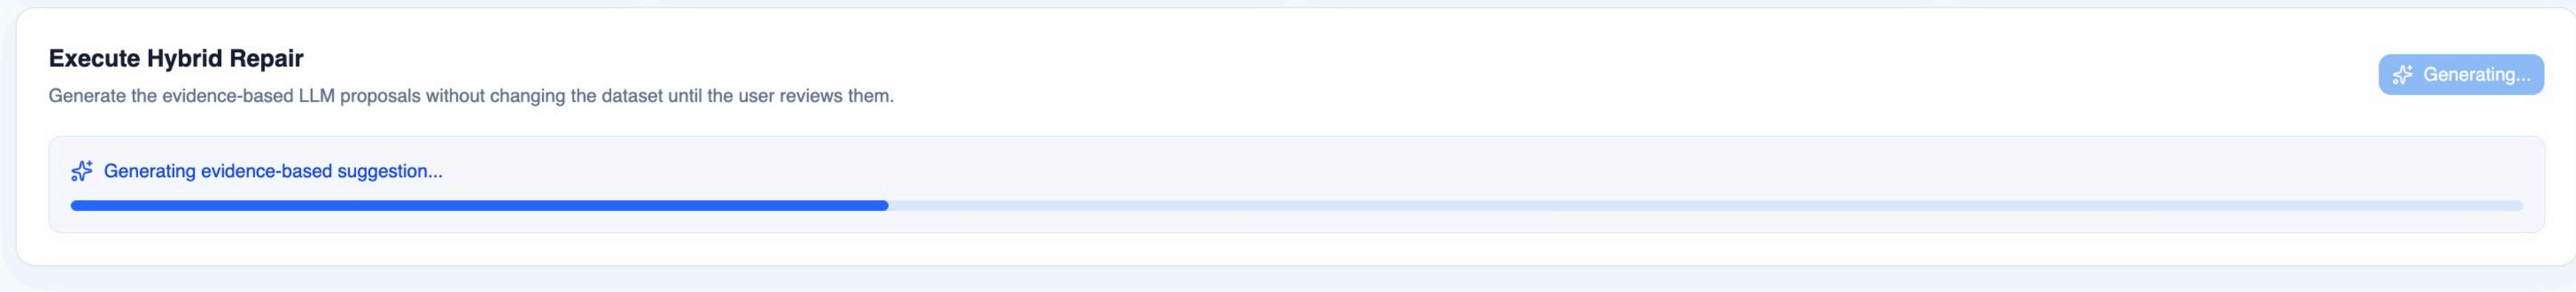

Direct Automated Resolution
Resolve simple, low-impact errors directly before download.

☐

Available only for Placeholder Values and Duplicate Records.

What Happens Next
The repair layer will generate and execute repair proposals automatically for the affected records without requiring manual approval for each proposal.

Affected Rows Preview					Total: 46
Row-level context behind the generated LLM suggestions.					Showing 1–10 of 46
Row Index	Original Value	Final Value	Why This Value?	Supporting Evidence	
65	2142-10-04 16:04:00	2142-10-04 21:44:00	The recorded discharge time is earlier than the same encounter's admission time. ED departure occurred at 21:44, so discharge must be later than that point.	Admission time is 2142-10-04 19:04:00 in the same encounter. ED departure time is 2142-10-04 21:44:00 in the same encounter. The original discharge time precedes admission and is temporally inconsistent.	
127	2159-05-10 17:17:00	2159-05-10 22:31:00	The original discharge time precedes the admission time and violates encounter chronology. ED departure occurred at 22:31, so discharge must be later than that time.	Admission began at 20:17 on the same day. ED departure is documented at 22:31 for this encounter. Discharge must occur after both admission and ED departure.	
141	2176-07-11 10:34:00	2176-07-11 19:34:00	The original discharge time occurs three hours before the recorded admission time. A later same-day discharge time restores valid ordering while staying within the same admission date.	Admission time is recorded as 2176-07-11 13:34:00. The original discharge time precedes admission, which is impossible. Same-day discharge should occur after admission for this encounter.	
283	2164-05-24 00:30:00	2164-05-24 00:34:00	The original discharge time is earlier than the admission time, creating a chronology error. The encounter is an emergency observation admission, so discharge must follow admission and ED departure.	Admittime is 2164-05-24 00:33:00, later than the original discharge time. ED departure occurred at 2164-05-24 00:30:00 in the same encounter. The admission was an emergency room observation encounter without death recorded.	

Affected Rows Preview					Total: 46
Row-level context behind the generated LLM suggestions.					Showing 1–10 of 46
Row Index	Original Value	Final Value	Why This Value?	Supporting Evidence	
65	2142-10-04 16:04:00	2142-10-04 21:44:00	The recorded discharge time is earlier than the same encounter's admission time. ED departure occurred at 21:44, so discharge must be later than that point.	Admission time is 2142-10-04 19:04:00 in the same encounter. ED departure time is 2142-10-04 21:44:00 in the same encounter. The original discharge time precedes admission and is temporally inconsistent.	
127	2159-05-10 17:17:00	2159-05-10 22:31:00	The original discharge time precedes the admission time and violates encounter chronology. ED departure occurred at 22:31, so discharge must be later than that time.	Admission began at 20:17 on the same day. ED departure is documented at 22:31 for this encounter. Discharge must occur after both admission and ED departure.	
141	2176-07-11 10:34:00	2176-07-11 19:34:00	The original discharge time occurs three hours before the recorded admission time. A later same-day discharge time restores valid ordering while staying within the same admission date.	Admission time is recorded as 2176-07-11 13:34:00. The original discharge time precedes admission, which is impossible. Same-day discharge should occur after admission for this encounter.	
283	2164-05-24 00:30:00	2164-05-24 00:34:00	The original discharge time is earlier than the admission time, creating a chronology error. The encounter is an emergency observation admission, so discharge must follow admission and ED departure.	Admittime is 2164-05-24 00:33:00, later than the original discharge time. ED departure occurred at 2164-05-24 00:30:00 in the same encounter. The admission was an emergency room observation encounter without death recorded.	
306	2142-01-11 21:34:00	2142-01-12 02:34:00	The original discharge time occurs before the admission time, which is temporally impossible. The encounter ends after ED departure at 01:59, so a later discharge time is required.	Admission occurred at 2142-01-12 00:34:00 in the same encounter. ED departure was 2142-01-12 01:59:00 for this emergency admission. Discharge must be later than both admission and ED out time.	
307	2110-11-15 06:05:00	2110-11-15 15:05:00	The recorded discharge time is earlier than the admission time, creating a temporal inconsistency. A later same-day discharge best restores valid ordering without conflicting with other supplied encounter details.	Admission occurred at 2110-11-15 09:05:00. The recorded discharge time is earlier than admission. Discharge location is home, supporting a same-day hospital discharge.	
445	2179-02-19 19:22:00	2179-02-19 23:53:00	The original discharge time occurs before admission and before ED departure, so it is inconsistent. ED out time at 23:53 and death on 2179-02-23 support a later same-day discharge time.	Admission began at 22:22, after the recorded discharge time. ED departure was 23:53 on the same encounter. Death occurred days later, so discharge must precede that event.	
514	2165-05-14 12:39:00	2165-05-14 15:40:00	The original discharge timestamp occurs before admission and violates chronological order. A discharge time one minute after admission is the smallest valid correction consistent with the record.	Admission time is recorded as 2165-05-14 15:39:00. Discharge location is home, so discharge must follow admission. No same-admission timestamps are available to support a different exact time.	
527	2139-07-27 13:04:00	2139-07-27 18:45:00	The original discharge timestamp is earlier than the recorded admission time. ED departure occurred at 18:45, so discharge must be later than that time.	Admission time is 2139-07-27 16:04:00 in the same encounter. ED departure time is 2139-07-27 18:45:00 in the same encounter. The original discharge time precedes admission and violates temporal consistency.	
577	2138-10-09 21:53:00	2138-10-10 04:16:00	The original discharge time occurs before the recorded admission time, making it temporally inconsistent. The same encounter shows ED departure at 2138-10-10 04:16:00, so discharge must be later than that.	Admission occurred at 2138-10-10 00:53:00 in the same encounter. ED departure was recorded at 2138-10-10 04:16:00. The original discharge time is earlier than admission and ED departure.

Total: 46
Showing 41–46 of 46

ROW INDEX	ORIGINAL VALUE	FINAL VALUE	WHY THIS VALUE?	SUPPORTING EVIDENCE
1863	2183-12-16 07:15:00	2183-12-16 18:15:00	🔍 The original discharge time occurs three hours before admission, which is temporally impossible. 🔍 Same-day surgical admission supports a later discharge time on the same date, and 18:15 satisfies ordering.	🔍 Admission time is 2183-12-16 10:15:00 for this hospitalization. 🔍 Admission type is surgical same day admission, supporting same-day discharge. 🔍 The original discharge time precedes admission and cannot be correct.
1891	2181-03-25 17:34:00	2181-03-25 22:34:00	🔍 The original discharge time occurs before both admission and ED departure, which is impossible. 🔍 A later same-day timestamp after the ED departure restores discharge sequencing while remaining on the admission date.	🔍 Admission began at 20:34 and ED departure was 21:26. 🔍 The original discharge time was 17:34, before admission. 🔍 Same-day discharge should occur after the ED departure time.
1900	2175-05-06 14:31:00	2175-05-06 20:52:00	🔍 The original discharge timestamp occurs before the recorded admission time and is invalid. 🔍 The emergency department out time is 20:52, so discharge must be later than that event.	🔍 Admission time is 2175-05-06 17:31, later than the original discharge time. 🔍 Emergency department out time is 2175-05-06 20:52 for the same encounter. 🔍 EU observation discharge must occur after admission and after ED departure.
1994	2181-04-05 14:21:00	2181-04-05 18:21:00	🔍 The original discharge timestamp is four hours earlier than the recorded admission time. 🔍 An elective admission with no death flag requires discharge after admission, so a later same-day time is the best reconstruction.	🔍 Admission time is recorded as 2181-04-05 17:21:00. 🔍 Hospital expire flag is 0, so discharge should follow admission. 🔍 Admission type is elective with discharge location recorded.
2046	2176-12-24 09:29:00	2176-12-24 13:57:00	🔍 The original discharge time is earlier than the admission time and is temporally impossible. 🔍 The ED departure time is 13:57, so discharge must occur at or after that point.	🔍 Admission began at 12:29 on the same day. 🔍 ED departure was documented at 13:57. 🔍 Discharge must be later than both admission and ED departure.
2050	2169-11-25 01:11:00	2169-11-25 22:04:00	🔍 The original discharge timestamp precedes the admission time, which is temporally impossible. 🔍 The record shows death at 22:04, so discharge must be no later than that terminal time.	🔍 Admission occurred at 18:50 on the same date. 🔍 Death was recorded at 22:04 on the same date. 🔍 Discharge location is documented as died.

Repair Session Explainability

Each operation below represents one independent column-level repair decision within the same unified repair session.

#	Column	Repair Method	Execution Mode	Rows Repaired	Status
1	disctime	LLM-Based Repair	Fully Automatic	46	Successful

Affected Records & Repair Evidence

Every affected record from the complete repair session is explained independently. The recorded repaired value is shown together with its supporting evidence.

Records92

Row0	Original Value2142-10-04 16:04:00	Repaired Value2142-10-04 21:44:00	> View Evidence
REPAIR REASON			
The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			
Row1	Original Value2159-05-10 17:17:00	Repaired Value2159-05-10 22:31:00	> View Evidence
REPAIR REASON			
The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			
Row2	Original Value2176-07-11 10:34:00	Repaired Value2176-07-11 19:34:00	> View Evidence
REPAIR REASON			
The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			
Row3	Original Value2164-05-24 00:30:00	Repaired Value2164-05-24 00:34:00	> View Evidence
REPAIR REASON			
The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			

Row	Original Value	Repaired Value	
5	2110-11-15 06:05:00	2110-11-15 15:05:00	> View Evidence
REPAIR REASON The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			
Row	Original Value	Repaired Value	
6	2179-02-19 19:22:00	2179-02-19 23:53:00	> View Evidence
REPAIR REASON The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			
Row	Original Value	Repaired Value	
7	2165-05-14 12:39:00	2165-05-14 15:40:00	> View Evidence
REPAIR REASON The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			
Row	Original Value	Repaired Value	
8	2139-07-27 13:04:00	2139-07-27 18:45:00	> View Evidence
REPAIR REASON The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			
Row	Original Value	Repaired Value	
9	2138-10-09 21:53:00	2138-10-10 04:16:00	> View Evidence
REPAIR REASON The target discharge time violates required ordering and is repaired to the supported ED departure timestamp.			

Showing 1 – 10 of 92 records

✔

Repair Outcome

Successful — 92 rows repaired across the complete repair session.

 1 operation recorded for **admissions_temporal_inconsistency_test_original.csv**. Identical backend/session representations of the same repair are consolidated into one audit record. Different column-level repairs remain separate. Statistical Anomalies are shown as a compact before-and-after summary, while other taxonomies retain row-level repair values.
