Selected Column

Review your selection before starting the assessment.

valuenum

Float

Select Error Taxonomy

Choose the type of quality issue you want the system to investigate for the selected column.

Placeholder Values

Detect placeholder values such as N/A or Unknown.

Duplicate Records

Identify duplicate records.

Statistical Anomalies

Unusual numerical values of non medical data.

Implausible Values

Unusual numerical values of medical data.

Temporal Inconsistencies

Conflicting dates and time relationships.

Unit Inconsistencies

Inconsistent measurement units.

Semantic & Contextual Inconsistencies

Unusual textual values of medical data.

Unit Configuration

Select the unit column when measurement values and units are stored separately, or indicate that the selected column contains both value and unit.

valueuom

Value and unit are combined

Example: "120 mg/dL" in the selected value column.

Ready for Quality Assessment

The system will process the selected taxonomy instead of automatically guessing the error type.

Choose Execution Mode

Select how the repair should be handled after quality assessment.

**Human-in-the-Loop**

☐

Review and approve the repair before it is applied.

☒ Review each proposed repair

☒ Approve, modify, or reject

☒ Changes require user confirmation

☒ Recommended for medical data review

**Fully Automatic**

☒

Execute the repair automatically without manual approval.

☒ Executes automatically

☒ No user interaction

☒ Fast execution

☒ Suitable for trusted repair strategies

**Direct Automated Resolution**

☐

Resolve simple, low-impact errors directly before download.

Available only for Placeholder Values and Duplicate Records.

**What Happens Next**

The repair layer will generate and execute repair proposals automatically for the affected records without requiring manual approval for each proposal.

REPAIR REASON

Records using kPa and cmH2O were converted to the canonical unit mmHg, affecting about 402 records in total. Records already in mmHg were kept unchanged. Standardizing to mmHg makes the value and unit columns consistent within this pressure group.

Audit

Chronological trace of every repair operation and its recorded repair evidence.

 Operation Timeline

Chronological record of the repair operations actually executed during this session, with compact statistical-repair evidence where applicable.

1

valuenum

Unit Inconsistencies → LLM-Based Repair

Successful

EXECUTION	ROWS REPAIRED	TIME	TIMESTAMP
Fully Automatic	2,234	0.01s	9/26/2026, 9:17:57 AM

1 operation recorded for **chartevents.csv**. Identical backend/session representations of the same repair are consolidated into one audit record. Different column-level repairs remain separate. Statistical Anomalies are shown as a compact before-and-after summary, while other taxonomies retain row-level repair values.
